

Enterprise browser security. No SOC, no Defender, no infrastructure to buy first.

You don't need a security team, a SIEM, or a Microsoft E5 licence to stop phishing and malicious links at the browser. Cybereinforce ships its own curated threat intelligence and blocks dangerous URLs the moment users click them — installed in minutes, managed from one dashboard, working from day one.

THE REALITY FOR SMALL TEAMS

What you're up against today

- ✗ **No dedicated security stack.** Most small businesses run on built-in browser protections alone — easy to bypass, no reporting, no control.
- ✗ **Phishing doesn't wait for headcount.** One clicked link can hand over banking credentials, email, or your customer data.
- ✗ **Enterprise tools assume you're already enterprise.** XDR and SIEM platforms are priced and staffed for organizations you're not yet.

THE CYBEREINFORCE ANSWER

Protection that doesn't need anything else first

- ✓ **Built-in threat intelligence.** Active protection against 500,000+ known malicious domains and 100,000+ targeted phishing URLs — curated by Cybereinforce, not borrowed from a stack you don't have.
- ✓ **Works the moment it's installed.** No SIEM to configure, no analyst to hire, no indicator feed to manage.
- ✓ **Grows with you.** If you adopt Microsoft Defender later, Cybereinforce plugs straight into it — nothing to rebuild.

1

One browser extension

Covers Chrome, Edge, Firefox and Safari on Windows, macOS and Linux — plus Safari on iOS and Firefox on Android.

2

Ten-minute deployment

Push it via MDM, browser policy, or share a join link at cybereinforce.com/join — no agent replacement, no network changes.

3

Self-service dashboard

See every block, add your own allow/deny rules, and brand the block page — no security background required.

500,000+

Malicious domains actively blocked

100,000+

Targeted phishing URLs covered
